IN SEARCH OF EXCELLENCE

Continuing education has always been an essential task in the university environment. That is why the Universidad Privada del Este (Sede Pte. Franco) has designed multiple strategies so that the due process of teaching-learning continues uninterrupted. Thus, a perfect symbiosis between research and knowledge was achieved, giving life to this Magazine.

The titanic task of collecting items was initiated by Arturo Vargas, in close cooperation with Lara Quiñónez and under this direction. Throughout the months of work already carried out, excellent professionals have joined, with sufficient experience about research, which has made it possible to solidify a stony foundation in the construction of this new space.

Of course, not everything has been wonderful. The lack of scientific articles, the little interest in making corrections on the part of the authors, including the sacrifice that this not very encouraging activity entails, means that the product that the distinguished reader currently receives in his hands has a delicious bouquet of satisfaction.

The push of our young Research Director, Fernando Gutiérrez, together with the support of the Dean, Héctor Arnella, have made this project continue and can offer the entire medical scientific community articles and reports from our beloved house of studies and other institutions.

There is nothing left but to continue in the search for the national bibliographical heritage to increase and in this way to be able to contribute to continuous medical education based on ethical, reliable, and responsible research.
